Twin Tester

The DINTEK twin tester provides instant identification of most common voice and data cabling problems including shorts, opens, reversals, and incorrect polarity.

The master and remote units separate for end-to-end testing of installed cabling or work separately as 2 patch cord test unit. Both pieces simply snap and lock together when not in use, making it easy to carry and store. Designed to fit neatly into a toolbox or pocket, the UTP tester has a convenient 'ring' feature for attaching to a belt or frame. The UTP tester should be used to check each channel from the station device to the system.

- Innovative 2-in-1 design features modular jacks for testing USOC and 568A/B cabling systems
- Accurately verifies the continuity and sequence of 1-,2-,3-, and 4-pair voice and data channels
- Continuously-sequencing LED display provides a diagnostic readout that immediately detects shorts, opens, reversals, and mis-wires at a glance
- Simply snap and lock master and remote units together when not in use
- Ergonomically designed hand-held unit is light weight, rugged, and impact-resistant
- 9 volt alkaline battery excluded
- Carry case included
